🏥 UAGB Nurse Triage AI Assistant - Quickstart Guide

Welcome!

The Nurse Triage Assistant helps you generate:

- Clinical Recommendations
- Patient Messages
- EMR Notes
  based on clinic protocols.

✍️ Step 1: Enter Patent Information

Fill out each of the 3 input boxes:

- **Symptom Description**
  (Example: "pink urine after stent removal")
- **Relevant Recent Procedures or History**
  (Example: "stent removal 2 days ago")
- **Concerning Symptoms**
  (Example: "mild dysuria, no fever, no clots"

🚀 Step 2: Click Generate

Click the **Generate** button after filling all fields.
The system will produce:

- A Clinical Recommendation
- A Patient Message
- An EMR Note for charting

📋 Step 3: Copy Outputs

- Click **Copy All** under each generated section.
- Paste the outputs into your patient chart, call message, or documentation system.

🧠 Important Reminders:

- Always **review** AI-generated notes before finalizing.
- Use clinical judgment to modify notes if needed.

- Escalate any uncertain situations to the supervising provider.

✅ Quick Tips:

- Use **simple, clinical language** when filling fields.
- Focus on the **most critical symptoms first**.
- Save time by copying outputs directly into the EMR or patient portal messages.
